

Assemble your implementation team

Executive Support

It is critical to have buy-in from senior management, especially the CFO. If the business leaders catch the vision and cast it into the organization, the project will be a success.

Project Owner

Drive the entire project to success. Communicate, schedule, and motivate the team. Create deadlines and hold others to their tasks.

IT

The head of the IT department will need to understand and support system requirements. Meet with IT as soon as possible and communicate the project details and timing.

SureStart Coach

MiSys provides a SureStart coach to provide implementation and data conversion support.

Consultant

Bring the knowledge in-house. Some organizations with limited experience working with software systems will benefit from working with one of our MiSys Manufacturing Business Partners.

End Users

Identify the individual(s) responsible for managing and tracking production, purchasing, and accounts payable. They will be trained on how to input data into MiSys Manufacturing.
